Solar Energy Brief Website

I will be building a microsite about [solar energy](#). This site will contain the basics for someone who is looking to learn about what solar energy is, why it's important, and how it works. I plan on the site being multiple pages as I think that is more conducive to this topic.

- **Home page:** what is solar? Why is it important?
- **Different types:** what are the different ways we try and harness solar power
- **How it works**
- **How it has changed**
- **Why is it important:** double down on this in its own page
- **sources**
